

Carotenoid Complex

Boost your immune cell count toward its most protective level!

USDA studies using NeoLife Carotenoid Complex show:

- A 37% increase in immune system cells to fight viruses and bacterial infection.
- A 20% boost in natural killer cells; your first line of defense against cancer.
- A 44% reduction in oxidative damage to cells linked to premature aging and most degenerative diseases, including cancer.
- A 500% increase of carotenoids in LDL cholesterol for greater protection against conditions that lead to heart disease.

Flavonoid Complex

Critical cellular protection against disease!

Multiply your protection with flavonoids. These are the rich blues, reds and purples of berries and grapes and luscious greens of limes, peas, and kiwis.

Discover the benefits of NeoLife Flavonoid Complex:

- Ingredients in NeoLife Flavonoid Complex inhibited the growth of cancer cells by more than 90% in a recent research procedure using human cells in culture. Volumes of published research link the following benefits with flavonoids:
- Lower risk for cardiovascular disease, such as stroke high blood pressure, heart attack and diseases of the arteries. Helps inhibit oxidation of "bad" cholesterol.
- Potent antioxidant protection against free radicals, supporting strong anti-cancer activity at all stages of carcinogenesis.

Anti-inflammatory action and enhanced immune response.

THE NEOLIFE DIFFERENCE

- Each tablet delivers an optimal serving of all 5 classes of flavonoids (including proanthocyanidins), derived from whole cranberries, kale, green tea (no caffeine), beets, elderberries, raspberries, blueberries, red grapes, black grapes, oranges, lemons and grapefruit.
- Also delivers ellagic acid, which has been shown to help protect against cancer.

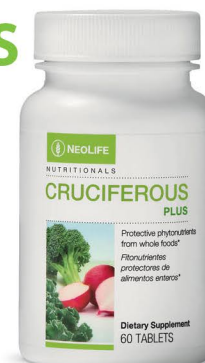

Cruciferous Plus

Nature's protection from breast and prostate cancers.

Neutralize and detoxify carcinogens before they attack your cells. Research shows that the phytonutrients in cruciferous vegetables like broccoli and cauliflower can lesson your risk for developing several types of cancer.

Two decades of research and hundreds of studies link the components in NeoLife Cruciferous Plus with:

- A lower risk of developing cancers of the breast and prostate. Other studies show significant anti-cancer activity for the lining of the uterus, lung, colon and other digestive tract cancers.
- Prevention of the conversion of "good" estrogen to "bad" estrogen, which is correlated with a higher risk for breast cancer.
- Lower cholesterol, the ability to help neutralize toxins, boost immunity, influence metabolism and reduce menopausal symptoms.

THE NEOLIFE DIFFERENCE

- Each tablet provides an optimal serving of phytonutrients from selected cruciferous vegetables -- broccoli, radish, kale, black mustard, brown mustard and watercress -- delivered in families for more complete protective activity.
- "Plus" related phytonutrients: D-limonene, chalcones and isoflavones -- which research demonstrates help protect cells against cancer.
